

177. Nth Highest Salary

Table: Employee

Column Name	Type
id	int
salary	int

- id is the primary key (column with unique values) for this table.
- Each row of this table contains information about the salary of an employee.

Write a solution to find the nth highest salary from the Employee table. If there is no nth highest salary, return null.

The result format is in the following example.

Example 1:

Input:

Employee table:

id	salary
1	100
2	200
3	300

n = 2

Output:

getNthHighestSalary(2)
200

Example 2:

Input:

Employee table:

id	salary
1	100

n = 2

Output:

getNthHighestSalary(2)
null
