

193. Valid Phone Numbers

- Given a text file file.txt that contains a list of phone numbers (one per line), write a one-liner bash script to print all valid phone numbers.
- You may assume that a valid phone number must appear in one of the following two formats: (xxx) xxx-xxxx or xxx-xxx-xxxx. (x means a digit)
- You may also assume each line in the text file must not contain leading or trailing white spaces.

Example:

Assume that file.txt has the following content:

- 987-123-4567
- 123 456 7890
- (123) 456-7890

Your script should output the following valid phone numbers:

- 987-123-4567
- (123) 456-7890
