493. Reverse Pairs

Given an integer array nums, return the number of reverse pairs in the array.

A reverse pair is a pair (i, j) where:

- $0 \le i \le j \le \text{nums.length}$ and
- nums[i] > 2 * nums[j].

Example 1:

- Input: nums = [1,3,2,3,1]
- Output: 2
- Explanation: The reverse pairs are:
 - \circ (1, 4) --> nums[1] = 3, nums[4] = 1, 3 > 2 * 1
 - \circ (3, 4) --> nums[3] = 3, nums[4] = 1, 3 > 2 * 1

Example 2:

- **Input:** nums = [2,4,3,5,1]
- **Output:** 3
- Explanation: The reverse pairs are:
 - \circ (1, 4) --> nums[1] = 4, nums[4] = 1, 4 > 2 * 1
 - o (2, 4) --> nums[2] = 3, nums[4] = 1, 3 > 2 * 1
 - o (3, 4) --> nums[3] = 5, nums[4] = 1, 5 > 2 * 1

Constraints:

- $1 \le \text{nums.length} \le 5 * 10^4$
- $-2^{31} \le \text{nums}[i] \le 2^{31} 1$
